

Providing Essential Training and Educational Opportunities to Industrial & Municipal Wastewater Operators

Operators Unlimited understands the challenges of not only recruiting wastewater operators but also providing the necessary training and continuing education opportunities for ongoing employee development, growth and success. We work closely with our customer partners, both industrial and municipal industry colleagues, to provide these essential educational elements needed for predictable and compliant wastewater operations.

Continuing Education

OU currently offers continuing education classes and certificates for operators licensed in the state of South Carolina. These classes, offered 2-3 time yearly, are open to anyone seeking continuing education credits.

•The State of South Carolina requires the following•

- Between July 1 and June 30 of each odd numbered year every operator and well driller must obtain a total of 12 hours of continuing education or pass the state examination.
- Operators should keep records of all courses attended.
- Continuing education can be obtained from schools, workshops, seminars, conferences, online training and/or in-house training sessions.

Visit the Operators Unlimited website to sign up for our continuing education email notifications. www.operatorsunlimited.net

On-Site Training

As a service to our customer partners, OU offers on-site training through job shadowing and instruction. This training has been developed to not only review wastewater fundamentals but also help develop the skill sets of less experienced operators. From solids removal and determining optimal chemical dosing to chemistry needs and safety, training can be customized to meet customer needs. Our training classes can be scheduled for additional information.

Test Preparation Tools

Wastewater operator's license test preparation classes and guides are provided to our customer partners. These tools are designed to assist wastewater operators as they prepare for Class D, C, B, or A exams in both physical/chemical and biological. Test preparation tools can be obtained by completing our contact form or reaching out to a sales team member for additional information.
